CALMISKIN®

A WELL-BEING WAVE
FOR SENSITIVE SKIN

To improve comfort for reactive skin suffering rough treatment from a harmful environment, stressed by a razor blade or weakened by daily use of irritant substances, Silab offers CALMISKIN®, a product rich in mint leaf flavanones that relieves the symptoms of skin sensitivity.

To combat these stresses, CALMISKIN® limits the symptoms of irritation (erythema, tingling and heat sensations) by inhibiting the release of key inflammation transmitters (interleukin-1 α , 8, prostaglandin E₂ and histamine) and regulating the microcirculation of the skin.

CALMISKIN® also provides immediate relief by stimulating the keratinocytary production of beta-endorphins, the « pleasure hormones » that help to control pain.

CALMISKIN® significantly reduces tingling sensations, soothes stinging after shaving, refreshes and softens the skin.

Because it relieves skin irritation by neutralizing micro-inflammatory reactions and their sensory manifestations, CALMISKIN® is recommended in all products to treat sensitive skin.
