

# REMODULINE®

**A NEW OFFENSIVE AGAINST CELLULITE:  
A SLIMMING AGENT  
EXTRACTED FROM BITTERORANGE**

**To fight cellulite and "orange skin", Silab has developed REMODULINE®, a new draining and de-infiltration active ingredient extracted from the petals of the bitter orange tree.**

Rich in methoxylated flavones and flavonones, REMODULINE® favors lipolysis and reduces fatty infiltration by inhibiting phosphodiesterase III, responsible for the degradation of cyclic AMP.

REMODULINE® facilitates draining of skin tissue by stimulating microcirculation via its vasodilating activity.

REMODULINE® is a lipolytic and decongesting active ingredient, recommended in the formulation of slimming products to smooth, tone and improve the silhouette.
