Re: JEECHEM CAH-40, JEECHEM CEO, JEELUX DMIPP, JEESILC DMC-522, JEESILC PTMF

In reference to the June 1st, 2007 enactment of European Union Regulation EC 1907/2006 pertaining to the Registration, Evaluation and Authorization and of Chemicals (REACH), we submit the following information:
JEEN International Corporation has been preparing over the past 2 years to accomplish REACH tasks. We have completed reviews of our substance and product base inclusive of:

- Purchased Raw Materials
- Intermediates
- Basis for Preparations
- Finished Products

Our preparation is a springboard to further actions that will be regulated by the REACH program. Currently, we have completed the Pre-Registration process for key substances covering all the JEEN product lines. This was accomplished before the end of 2008. We are now in the process of final registration.

You may be aware that the European Commission is still outlining some details related to the implementation of REACH, particularly guidelines and the estimation of registration costs. For this reason, any forecast about future product availability is premature and not possible given the currently available information.

As a result of our preparation and research, we are informing you via this letter that we have Pre-Registered a wide portfolio of substances which, in the near future, will be released to you for informational purposes. However, since we are still in the early implementation stages of the overall REACH program, JEEN International reserves the right to refrain from final registration of substances and/or products due to potentially significant higher costs associated with REACH. Since assessment for each product will be accomplished at the end of the Pre-Registration term, we will inform you as soon as possible on those products that are not sustainable, thereby giving you the opportunity to make informed decisions seeking alternatives.

Note that there is no obligation to register Polymers (excluding those ingredients that are included on the "No-Longer Polymer" List), which our product range incorporates. Additionally, to our understanding, the Material Safety Data Sheet(s) will be the primary information vehicle referenced by REACH. This document will include "exposure scenarios" for the intended applications which must be suitably described. We will need your assistance over the next several months to disclose applications and provide "exposure scenarios" related to the products you purchase from JEEN International Corporation. This important information will be indicated in the Material Safety Data Sheet(s).

We trust this communication is helpful and also helps clarify our position. We look forward to collaborating with you on the many phases to complete over the next year in order to bring the REACH program to fruition.

Very truly yours,
JEEN International Corporation
